

IN THE CLAIMS

Please amend claim 11 as follows:

11. (amended) A multi-component emergency medical system of a size and weight which can easily be carried by a single hand comprising:

a breathable oxygen delivery system;

at least one measurement system which measures at least one of a patient's blood or respiratory gas content, saturation, affinity or perfusion; and

a unitary casing for housing said oxygen delivery system and said measurement system;
the cumulative size and weight of the unitary casing, when housing the oxygen delivery system and the measurement system, can easily be carried by a single hand.

CLAIM STATUS AND SUPPORT FOR CLAIM CHANGES

After this amendment, claims 1-10 remain canceled and claims 11-39 remain pending.

No new claims have been added.

Claim 11 has been amended to specify that the blood or gas referenced in line 4 is that of the patient and that the gas is respiratory gas. Support for this language can be found for example in the '497 patent under reissue in the paragraphs at column 1, lines 14-36, column 4, lines 48-50 and column 5, lines 4-11. It is quite apparent from these excerpts as well as from other portions of the specification, that the recited measurement system is monitoring blood and respiratory gas parameters of a patient.
